- 2 **Ultimate Debian Database**
 - Short introduction
 - Advantages of using UDD for Blends
- 3 **Future**
 - Planned features for Blends
 - TODD

- Term Custom Debian Distributions was always misunderstood
 - Main misunderstanding: CDD was regarded as “something else than Debian” even if people were told that it is a concept *inside* Debian explicitly
 - Dropped the misleading name in favour of a name where you just have to read the docs
- **Debian Pure Blend (in short Blend):** a subset of Debian that is configured to support a particular target group out-of-the-box.

- Term Custom Debian Distributions was always misunderstood

- Debian > 22.000 packages
- Users interested in *subset*
- Groups of specialised users
- Easy installation and configuration
- While Debian stays general support specialists as well
- **No derivative** from Debian

Basic idea: Do not make a separate distribution but make Debian fit for special purpose instead

Debian Pure
Blends

Short introduction

Blends features

Web tools

Ultimate
Debian
Database

Short introduction

Advantages

Future

Planned features for

Blends

TODO

- Tie a solid network of Debian developers, upstream developers (“developing experts”) and users
- Rationale: Experts in this field need help in build system / packaging
- Upstream anticipates enhancements of build system and security audit
- Finally support upstream developers to become Debian maintainers
- Penetrating specific work fields with Linux makes it even more acceptable in general

→ Demo `http://blends.alioth.debian.org`

- Try to find a measure for bugs of dependant packages
- Currently not normalised to the number of dependencies but rather regarding absolute number of bugs
- Weighting numbers for the different severities ranging from 10 for the RC bugs until 0 for wishlist bugs

Example calculation

1 serious bug in dependent pkg:	$1 * 10 * 3 = 30$
2 important bugs in dependent pkg:	$2 * 5 * 3 = 30$
1 important bug in suggested pkg:	$1 * 5 * 1 = 5$
1 normal	$1 * 3 * 3 = 9$
1 minor	$1 * 1 * 3 = 3$
weighted sum =	77

- Try to find a measure for bugs of dependant packages
- Currently not normalised to the number of dependencies but rather regarding absolute number of bugs
- Weighting numbers for the different severities ranging from 10 for the RC bugs until 0 for wishlist bugs

Example calculation

1 serious bug in dependent pkg:	$1 * 10 * 3 = 30$
2 important bugs in dependent pkg:	$2 * 5 * 3 = 30$

 - **DEHS** (since 2 days 😊)
- Information updated via cron jobs from different public sources
- Also Ubuntu package information available but not relevant in Blends context

- Easy to write gatherers from new information sources
- DDTP, new queue and screenshots were actually injected to support more features of task pages of Blends
- Simple handling of package versions by `debversion` data type
- Just contains all relevant information about packages which are needed for Blends

Application of
UDD in
Blends

- Formerly *Packages.gz* of only one Debian release (unstable) and one arch (i386) was parsed to get a reasonable ratio of performance for the intended purpose
 - Large effort to download all DDTP translations
 - BTS SOAP took it's time

- Not only very quick access to packages information but also information about
 - all releases
 - all available versions
 - all architectures
 - information about packages in experimental
- DDTP was injected into UDD to speed up gathering description translations drastically
- BTS information with simple and quick SELECT

- Further enhancements (DEHS, lintian)
- Rewrite *blends-dev* to use UDD
- Make even more projects like DebiChem and Debian-GIS actively using the framework
- Try to bring back external projects to Debian by providing attractive tools
